NEPA Task Force Web Site Reports a New Feedback Entry:

Name: Michael Grauer

Email Address: mgrauer@centurytel.net

Comments: The existing laws and environmental process for logging projects
SHOULD NOT be changed. Those protections stand to protect our natural
environment against those that would profit at our nations expense.

Water quality regulations have been weakened by this Administration and need
to
be more stringent and aggressive to assure the American public pure water for
drinking and recreation. Our rivers and stream should flow clean.

We must join in the Kyoto accords and become a world partner in reducing
emissions and aiding our third world neighbors.
